
APC Technology & Acacia Research formalise partnership to supply systems for Land 400

APC Technology and Acacia Research are combining forces to offer a mission system primarily designed for Land 400 but with applicable use across other defence-based projects. The system will include APC Technology's comprehensive range of MIL-SPEC equipment and Acacia Research's advanced surveillance and mission systems.

Scott Begbie, APC Technology's Managing Director says: "With our expertise in custom built MIL-SPEC computing solutions and Acacia Research's software capabilities, we believe we will be able to offer

solutions for the command & control requirements of LAND 400."

Ted Huber, Director of Acacia Research further commented: "This is a significant step by both companies to provide a South Australian solution for one of the largest national defence projects to date. With over 60 years' experience between our two companies, we believe we can offer an outstanding solution that is home grown plus a global-leading technology package that can be customised to meet multiple opportunities."
