By: Stephen Kuper

A new South Australian-based Defence company, REDARC Defence Systems, has been established by

the owner and managing director of REDARC Electronics, Anthony Kittel.

Since first exploring the defence market in 2015, REDARC has been demonstrating its capabilities in advanced design and manufacturing to meet the demands of defence. The first five years have seen the company gain a greater recognition in the industry.

Now with a growing defence team and a growing list of defence partnerships, the company said it was time to establish REDARC Defence Systems, an entity that will advance its defence portfolio.

Established in 1979, REDARC Electronics is an Australian, privately-owned, advanced manufacturer supplying patented solutions to the Australian and international heavy commercial and defence vehicle sectors.

REDARC Defence Systems has been set up to meet the growing needs of the Australian Defence market for wholly Australian-owned defence medium-sized enterprises that can foster the development of intellectual property in Australia.
