

Mitsubishi Motors Australia begins construction of new headquarters

Mitsubishi Motors Australia marks its 40th year with new construction and relocation to Adelaide Airport

Mitsubishi Motors Australia (MMAL) has broken ground on its new Australian headquarters in the Adelaide Airport business precinct. Project completion and staff relocation is expected in early 2021.

MMAL will this year celebrate its 40th anniversary in Australia and an enduring connection with South Australia, as it has evolved from a manufacturer to importer of vehicles.

MMAL's CEO, Shaun Westcott, commented at the ground-breaking ceremony that Mitsubishi's close ties with South Australia have played an important role in the success of Mitsubishi.

"For forty years, South Australia and Mitsubishi have been closely linked and we are pleased to be able to continue to build on these ties with this investment in our new national headquarters here in SA.

"We're confident we have the right product, the right people – and soon the right facility, to be able to continue to meet the needs of our customers for many decades to come," said Mr Westcott.

Adelaide Airport Managing Director, Mark Young, said he was delighted Mitsubishi had chosen the airport to be the global gateway to its Australian business.

"It's no accident that major companies such as Mitsubishi have recognised the benefits of being on the doorstep of a major international airport, while being central to ground transport links to the port of Adelaide and the city centre," said Mr Young.

"Mitsubishi joins the calibre of Oz Minerals, Australian Clinical Laboratories and Otis who have all recently moved into our Airport Business District."

"Built are proud to be part of MMAL's 40th anniversary year as we deliver their new headquarters in South Australia. Employing an excess of fifty staff in South Australia, this will be our fourth major project delivered on AAL land in the last five years - a testament to our great relationship with AAL." Christopher Bate, General Manager, SA, Built.

About the facility

Located at the intersection of Sir Donald Bradman Drive and Airport Drive, the new building will span three levels. The building is designed to facilitate a more innovative and agile way of working with inclusions such as flexible meeting rooms and collaboration zones.
